

CODAN

Spikes

Versatile programme for the safe handling of drugs and cytostatics

The decisive connection

The preparation and withdrawal of drugs and cytostatics present a high risk of bacterial and particulate contamination as well as leakage and aerosol contamination. The more varied the

preparations used, the safer and simpler their handling should be. CODAN has therefore developed a compact and handy needle-free system for the preparation and withdrawal of drugs.

Versatile safety

CODAN Spike

The CODAN Spike is the central element in the system. Effortless piercing ensures safe handling. The integral filter guarantees sterile aeration during withdrawal.

CODAN Spike^{SWAN}

The patented SWAN-LOCK[®] mechanism renders the use of a separate cap superfluous. Ideal for frequent applications.

Chemoprotect[®] Spike

The additional integral 5 µm fluid filter in this spike reliably prevents particulate contamination of solutions.

Chemoprotect[®] Spike^{SWAN}

The patented SWAN-LOCK[®] mechanism offers additional safety and even easier handling here too.

Chemoprotect[®] MicroSpike

The Chemoprotect[®] MicroSpike has been specially developed for use on very small medication ampoules. The blue spike protection cap allows simple identification of the Chemoprotect[®] MicroSpike.

Chemoprotect[®] MicroSpike^{SWAN}

The Chemoprotect[®] MicroSpike is, of course, also provided with the option of the patented SWAN-LOCK[®] mechanism.

Spike protection cap

The protection cap on all spike products protects against damage and contamination. In addition, it is designed to fit on the Male Luer-Lock of syringes as added contact-contamination protection.

Pricking

The special shaping of the spike tips allows effortless puncture of the caps of drug vials.

Dissolving

Safe handling: Male Luer-Lock syringes should always be used allowing problem-free connection to the standard Luer-Lock connection or the SWAN-LOCK® mechanism of the spikes.

Withdrawal

Sterile aeration by integral filter; the Chemoprotect® Spike (illustrated) also has an additional microfilter against particulate contamination.

Chemoprotect® Spikes

Patient safety and therapeutic success have top priority. Chemoprotect® Spikes create the precondition of reliably preventing contamination of prepared drugs by microorganisms or particles (e.g. from rubber abrasion).

Integrated safety

An integrated, hydrophobic 0.20 µm filter in all spikes guarantees sterile aeration and venting, and reliably retains toxic aerosols during drug preparation. The Chemoprotect® Spike additionally features an integrated 5 µm fluid filter.

Small things ...

... can sometimes present the greatest challenge. The Chemoprotect® MicroSpike has been specially developed for complete withdrawal from small drug vials and considerably improves handling.

Product	Sterile aeration and venting with aerosol filter	5 µm fluid filter	Suitable for mini-ampoules	Needle-free adapter SWAN-LOCK®	Filling volume (ml)

CODAN Worldwide

CODAN is known internationally as a manufacturer and supplier of medical transfer systems. The CODAN Companies have more than 1500 employees around the world.

The name CODAN is synonymous with reliability, quality and precision based on the know-how and experience gained from more than 60 years of research and development. Company-owned production facilities and sales companies around the world are a guarantee for efficient production, a tight-knit sales network and a first-class service for customers in the healthcare sector.

CODAN Product range

- Infusion sets
- Transfusion sets
- Extension sets & Manifold connectors
- Infusion & Transfusion accessories
- Infusion filters & Filter systems
- Neonatology & Paediatrics products
- Withdrawal, Preparation & Administration systems
- CODAN CYTO®
- Chemoprotect® products
- Urology & Gynaecology products
- Single use syringes
- Invasive Blood Pressure Monitoring
- Infusion Technology Solutions
- Volumetric & Syringe pumps
- Software
- CODAN COMPONENTS
